

Technical Specification

Dual Output Quarterbrick w/ Baseplate

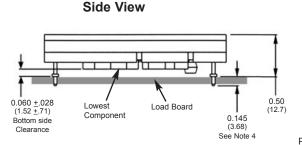

Mega Series

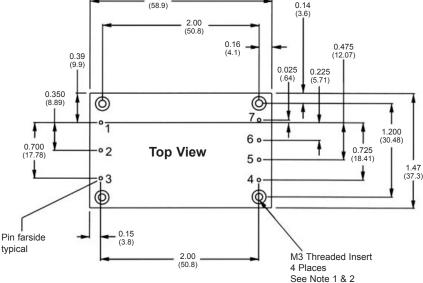

Dual Output Quarter-Brick DC/DC Converter w/ Baseplate

This technical addendum contains additional specifications for the baseplated verison of the DualQor Mega quarter-brick series of converters. This unit is manufactured by adding an industry standard size baseplate to the non-baseplated quarter-brick converter using standard mounting techniques. The baseplated version allows for optional heatsinking in severe thermal environments or for mounting to a cold plate. Please refer to the DQ6xxxxQMAxx specification sheets for all specifications that are not included in this addendum.

MECHANICAL LAYOUT

NOTES

- 1) M3 screws used to bolt unit's baseplate to other surfaces (such as heatsink) must not exceed 0.100" (2.54 mm) depth below the surface of the baseplate
- 2) Applied torque per screw should not exceed 6in-lb. (0.7 Nm)
- 3) Baseplate flatness tolerance is 0.004" (.10mm) TIR for surface
- 4) Other pin extension lengths available
- 5) All pins are 0.040" (1.02mm) diameter with 0.080" (2.03mm) diameter standoff shoulders
- 6) Undimensioned components shown are for visual reference
- 7) Weight: 2.5 oz. (70g) typical
- 8) All dimensions in inches (mm)

Tolerances: x.xx + /-0.02 in. (x.x + /-0.5mm)

x.xxx + -0.010 in. (x.xx + -0.25mm)

9) Workmanship: Meets or exceeds IPC-A-610B Class II

SPECIFICATIONS (differ from DQ6xxxxQMAxx specs)

Weight: add 0.95 oz. (27 g) to

non-baseplated unit weight

Max Baseplate Temp Limit: 100°C

- 40°C to +125°C Storage Temperature:

All other specifications are identical to non-baseplated DualQor converters of equivalent input voltage, output voltage and output current.

Product # DQ6xxxxQMBxx

Doc.# 005-2DQBXXE Rev. C

ATTACHING HEATSINKS

Follow the guidelines given below when attaching a heatsink to a DualQor converter with baseplate.

- 1) A thermal interface material is required to assure proper heat transfer from the baseplate to the heatsink. Thermal grease may be used, or materials such as Thermalloy's Grafoil or Bergquist's HiFlow and SoftFace. Other similar products are available from many heatsink manufacturers.
- 2) Use four M3 threaded machine screws for attachment. The length of the screw will depend on the thickness of the heatsink baseplate. The maximum permissible screw length below the top surface of the baseplate is not to exceed 2.54mm (0.100") in order to prevent damage to any internal components.
- 3) The screws should be tightened with a torque suitable to get a tight fitting of the heatsink against the thermal interface material and the baseplate. The applied torque per screw should not exceed 0.7 Nm (6 in-lb).

PART NUMBERING SYSTEM

The part numbering system for SynQor's DualQor DC/DC converters follows the format shown in the example below. For a complete listing of available part numbers, please refer to the SynQor web site.

The first 12 characters comprise the base part number and the last 3 characters indicate available options.

Selected *Dual*Qor modules are available with a baseplate. Before ordering basplated modules, one should consult the factory to ensure that the specific product is available in a baseplated version. The Mega series of dual output quarterbricks that have a baseplate should be designated with the letter "B" as the 10th character in the full 15 character part number. The other characters in the part number would follow the same format as a non-baseplated unit to indicate the desired input and output voltage, package size, performance level, rated power, enable logic, pin length and feature set.

When ordering SynQor converters, please ensure that you use the complete 15 character part number.
