MILITARY COTS EMI FILTER

-40V to +40V	30A	20mΩ @ 100°C	>80dB @ 250kHz
Continuous Input	Output Current	Max. DC Resistance	Differential Attenuation

FULL POWER OPERATION: -55ºC to +100ºC

MilCOTS™

The Mil-COTS series of EMI filters brings SynQor's field proven technology and manufacturing expertise to the military and aerospace industry. SynQor's innovative packaging approach ensures survivability in the most hostile environments. Compatible with the industry standard format, these filters have high differential-mode and common-mode attenuation, low DC resistance, and a stabilizing bulk capacitor resistor. They follow conservative component derating guidelines and they are designed and manufactured to the highest standards.

Designed and Manufactured in the USA

Operational Features

- 30A output current
- Very low DC resistance
- >80 dB differential-mode attenuation at 250kHz
- >36dB common-mode attenuation at 250kHz
- Stabilizing bulk capacitor and damping resistor included
- All capacitors are X7R multi-layer ceramic
- Designed to meet all MIL-STD 461 EMI requirements (D, E, F)

Mechanical Features

- Size: 2.39" x 1.54" x 0.500"(60.6 x 39.0 x 12.7 mm)
- Total Weight: 3.23 oz. (91.6 g)
- Flanged baseplate version available

Safety Features

- 2250V input/output to case isolation
- Certified 60950-1 requirement for basic insulation (see Standards and Qualifications page)

In-Line Manufacturing Process

- AS9100 and ISO 9001 Certified Facility
- Full component traceability

Screening Qualifications

- Qualified to MIL-STD-810
- Available with S-Grade or M-Grade screening
- Pre-cap inspection per IPC-610, Class III
- Temperature cycling per MIL-STD-883, Method 1010, Condition B, 10 cycles
- Burn-In at 100°C baseplate temperature
- Final visual inspection per MIL-STD-883, Method 2009

Basic Operation and Features

This module is a multi-stage differential-mode and common-mode passive EMI filter designed to interface a power source with one or more Mil-COTS DC-DC converters (or other loads that create EMI). Each stage of this filter is well damped to avoid resonances and oscillations, and only X7R multi-layer ceramic capacitors are used. This Mil-COTS EMI filter includes a large bulk capacitor with a series damping resistor to correct for the unstabilizing effect of a converter's negative input resistance. A white paper discussing this negative input resistance and the need for corrective damping can be found on the SynQor website (see Input System Instability application note).

When used with SynQor's DC-DC converters, the Mil-COTS EMI filter is designed to pass all of the relevant MIL-STD-461C/D/E requirements to their most stringent limits. The MIL-STD-461 Compliance Matrix Table lists these requirements and describes the setup used to pass them. Figures 3 - 6 show results from selected conductive and radiated emissions tests.

A typical application would place the Mil-COTS filter close to the input of the DC-DC converter. The input-side common-mode pin would be connected to the chassis ground that is common with the system input line filter or other earthed point used for EMI measurement. The output-side common-mode pin would be connected to the output ground or plane of the power converters with as low inductance a path as possible. There are no connections to the metal baseplate, which may also be connected to the chassis ground if desired.

Do not connect the outputs of multiple Mil-COTS filters in parallel. Connecting filters in this manner may result in slightly unequal currents to flow in the positive and return paths of each filter. These unequal currents may cause the internal common-mode chokes to saturate and thus cause degraded common-mode rejection performance.

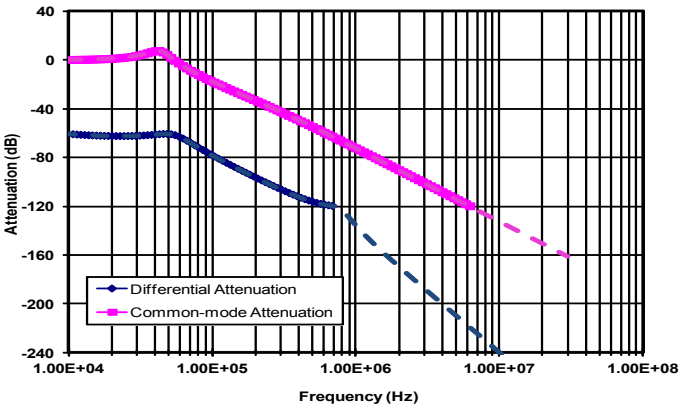

Figure A: *Simulation of calculated common mode and differential mode attenuation. The curves plot the ratio of noise current in a 50Ω LISN sensing port connected to the noise output side of the filter (the power input side, pins 1 and 3) to the noise current on the input side (the power output side, pins 4 and 6). Refer to Figures B and C.*

Military Standard 461 Compliance Matrix

This table shows the MIL-STD-461 requirements/limits that will be met* by the stand-alone setups indicated below:

Mil-Std-461	MIL-STD-461D/E/F	
	Requirement	Most Stringent Limit Listed
Conducted Emissions	CE101 CE102	Submarine Basic Curve
Conducted Susceptibility	CS101 CS106 CS114 CS115 CS116	Curve #2 461F Only Curve #5 Basic Waveform Imax = 10A
Radiated Emissions	RE101	Navy
	RE102†	Submarine
		Fixed Wing Internal, >25 meters Nose to Tail
Radiated Susceptibility	RS101 RS103	Army Aircraft External

* Susceptibility requirements/limits are considered to be met as long as transient deviations in the converter's output voltage remain within ±10% of its initial value.

† Met with metal screen shield covering the filter, converter, and resistive load.

‡ In almost every case the limit listed is the most stringent of the requirements. The one exception is CE03 - High Frequency Broadband Conducted Emissions, Converter with Passive Filter. In this case the filter and converter passed the A1 limit. The filter and converter pass the CE03 - Narrowband Conducted Emissions at the A5 limit level.
