

**UPS[®] MILITARY
FIELD-GRADE**
UPS-1500 3Φ 440 V (L-L)

MILITARY FIELD-GRADE UNINTERRUPTIBLE POWER SUPPLY

1500 VA / 1250 W Output Power	360 - 528 V (L-L) 3-Phase Delta; 47 - 800 Hz AC Input Voltage	115 Vrms or 230 Vrms 50 Hz, 60 Hz or 400 Hz AC Output Voltage Options	28 Vnom DC Input Voltage Option	500 W or 1250 W DC Output Voltage Option	>10/13.5/16 min. - 1U Battery Run Time Options
--	---	---	---------------------------------------	--	---

Sealed Construction, Ultra Low Weight, Compact Size

DESIGNED & MANUFACTURED IN USA

N+M REDUNDANCY
(optional)

SynQor's Military Field-Grade Uninterruptible Power Supply units are designed for the extreme environmental and demanding electrical conditions of Military/Aerospace applications. SynQor's UPS incorporates field proven high efficiency designs and rugged packaging technologies. This UPS will accept a wide range of input voltage and frequency values while delivering a well-conditioned AC output to the load. Up to three units can be combined to provide higher power, higher voltage and/or multiple output phases. The use of lithium ion batteries permits the lowest profile and lowest weight solution in its power class. It is designed to comply with a wide range of military standards. Options include a 500 W or single 1250 W DC output, a DC input rated for military 28 VDC sources, and an electronic breaker on the AC output provides fault-tolerant parallel operation for higher power and/or N+M redundancy.

Combine units for Higher Power, Voltage, 3-Phase AC output, and/or Redundancy

Features

- Sealed, weather-proof, shock-proof construction
- Hot swappable internal battery pack (lithium ion)
- >10 minute run-time at full power
- 1250 W (1500 VA) output power
- Full power operation: -20°C to +55°C
- 3 Phase AC input: 360 - 528 Vrms (L-L)
- Wide range AC input frequency: 47 - 800 Hz
- Power factor correction at AC input
- Dual input (AC and optional DC)
- True on-line double conversion
- Cold start with no AC or DC input connections
- Pure sinusoidal AC output voltage
- Handles 0.0—1.0 power factor loads and non-linear loads
- Up to 3 units can be combined for higher power, voltage or a 3-Phase AC output
- Up to 32 units can be combined to form a higher power fault-tolerant, glitch-free system, perhaps with N+M redundancy, by ordering with the "AC Output Electronic Breaker" option and the appropriate configuration cable
- User I/O and Configuration signal ports
- 1U high rack mount unit (17.00" W x 22.64" D x 1.73" H)
- Low weight: 33 lbs. (including battery)

Options

- DC input (28 Vnom) for dual source
- UPS-1500-H-1U > 13.5 minutes of run-time
- UPS-1500-M-1U > 16 minutes of run-time and -40°C operation
- 115 Vrms or 230 Vrms AC output
- 50 Hz, 60 Hz, or 400 Hz output
- DC1: Auxiliary isolated DC output (up to 500 W)
- DC2: High power DC output (up to 1250 W) parallelable for higher power
- Shipboard version with floating neutral wire

Specification Compliance

UPS-1500 units are designed to meet:

- MIL-STD-1399-300B - Interface Std for Shipboard Systems
- MIL-STD-810G - Environmental Engineering Considerations
- MIL-STD-461F - Electromagnetic Interference
- MIL-STD-704F - Aircraft Electrical Power Characteristics
- MIL-STD-1275D - Vehicle Electrical Power Characteristics

Technical Specification

INPUT CHARACTERISTICS

Operating AC Input

Voltage Continuous	360 - 528 Vrms (L-L)
3-Phase Connection Type	3-Wire Delta
Frequency	47 - 800 Hz
Power Factor (100% load)	0.999 at 60 Hz 0.99 at 400 Hz
Maximum Input Current Continuous (per phase)	3.0 A (full load, 208 Vrms L-N)
Internal AC Input Fuse Rating	12 A

Operating DC Input (Optional)

Voltage	22 - 33 Vdc
Continuous Maximum Input Current	62 A (full load, 22 Vdc)
Transient Maximum Input Current	75 A

OUTPUT CHARACTERISTICS

Total Output Power Continuous	1250 W (1500 VA)
Maximum DC1 Output Power	510 W
Maximum DC2 Output Power	1250 W

(Note: Available AC power is reduced by power delivered to the DC output)

AC Output

AC Output Waveform	Pure Sinusoidal
Voltage	115 Vrms ± 3% 230 Vrms ± 3%
Frequency	60 Hz ± 0.5% 50 Hz ± 0.5% 400 Hz ± 0.5%
Peak Load Current	26 A (115 Vrms) 13 A (230 Vrms)
Load Power Factor	0 - 1.0 (leading or lagging)
Total Harmonic Distortion	2% (1000 W resistive load)

DC1 Output (optional)

Voltage Regulation (Over Load & Temperature)	± 3%
Common Voltage/Power combinations (DC1)	12 V at 42 A =504 W 15 V at 34 A =510 W 24 V at 21 A =504 W 28 V at 18 A =504 W 40 V at 12.5 A =500 W 50 V at 10 A =500 W

DC2 Output (optional)

Voltage Setpoint	± 3%
------------------	------

No Sharing

Voltage Regulation (Over Load & Temperature)	-2%
Common Voltage/Power combinations (DC2)	24 V at 50 A =1200 W 28 V at 44.6 A =1250 W 50 V at 20 A =1000 W

Droop Share (Output droops vs. load to allow passive sharing among modules.)

24 V Option

Voltage Regulation (Over Load & Temperature)	-15%
	26 V at 0 A 22 V at 50 A =1100 W

28 V Option

Voltage Regulation (Over Load & Temperature)	-13%
	30 V at 0 A 26 V at 48.1 A =1250 W

50 V Option

Voltage Regulation (Over Load & Temperature)	-10%
	52 V at 0 A 48.5 V at 20.6 A =1000 W

Specifications subject to change without notice.

ENVIRONMENTAL CHARACTERISTICS MIL-STD-810G

Temperature Methods 501.5, 502.5

Operating Temperature	-20°C — +55°C
Storage Temperature	-40°C — +65°C

Altitude Method 500.5

Operating	0 - 18,000 ft
Non-operating	0 - 40,000 ft

Environmental Tests

Shock/Drop	Method 516.6, Procedures 1,4,6
Temperature Shock	Method 503.5, Procedure 1
Vibration	Method 514.6, CAT 5, 7, 8, 9, 24
Fungus	Method 508.6
Salt Fog	Method 509.5
Sand and Dust	Method 510.5, Procedures 1,2
Rain	Method 506.5, Procedure 1
Humidity	Method 507.5, Procedure 2
Mechanical Vibrations of Shipboard Equipment	Method 528, Procedure 1

RELIABILITY CHARACTERISTICS MIL-HDBK-217F

MTBF	100 kHrs	MIL-217F Ground Benign, Ta=25 °C
------	----------	----------------------------------

ELECTROMAGNETIC CAPABILITY MIL-STD-461F

CE101	30 Hz - 10 kHz
CE102	10 kHz - 10 MHz

CS106	10 kHz - 40 GHz
CS114	10 kHz - 200 MHz
CS116	10 kHz - 100 MHz
RE101	30 Hz - 100 kHz
RE102	10 kHz - 18 GHz
RS101	30 Hz - 100 kHz
RS103	2 MHz - 40 GHz

MECHANICAL CHARACTERISTICS

1U (Standard Battery Pack)

Chassis Size (H x W x D)	17.00"W x 22.64"D x 1.73"(1U)
Case Material	Aluminum
Total Weight	33 lbs. (with chassis & battery)

Connectors

AC Input Connector	CB2-20-4PHA34-FM
DC Input Connector	MS3470L18-8P
AC Output Connector	MS3470L14-4S
DC1 Output Connector	MS3470L14-4SW
DC2 Output Connector	MS3470L18-8S
User I/O Ports	HD DB15 Female
Configuration I/O Port	HD DB15 Male
Ethernet Port	Amphenol RJF22N00, Code B

Cooling Exhaust Fans

Sound Pressure Level (SPL)	54 dB(A)
Air Flow	0.67(m³/min) 23.7 CFM

Two fans in system, above specs are for each fan separately.

Technical Specification

High Density DB15 Female (15 Pin Connector)

Signal	PIN	Function
TX	2	RS232 DCE Device Transmit
RX	3	RS232 DCE Device Receive
GND	4, 5	Ground reference for all digital inputs and outputs
LOW BATT	6	Open collector output where "low" indicates battery charge level <10%
ACIN GOOD	7	Open collector output where "low" indicates AC Input voltage is within range
+5V	8	Vout with minimal current drive usable as a pull-up voltage for open collector output signals. Load must be <35mA
ON BATT	9	Open collector output where "low" indicates that the UPS is running on battery power.
REMOTE START	12	Drive this line "high" with ≥5mA to enable UPS outputs
SHUTDOWN	13	Drive this line "high" with ≥5mA to disable UPS outputs
OUT OK	14	Open collector output where "low" indicates AC Output voltage is within range
OVER TEMP	15	Open collector output where "low" indicates that the UPS is at or above its maximum temperature

LITHIUM-ION BATTERY CHARACTERISTICS

UPS-1500-S-1U, BAT-0200 Pack Run Time

Recharge Time (to 90% charge)

UPS-1500-[S,H,M]-1U, BAT-0200 or BAT-0400

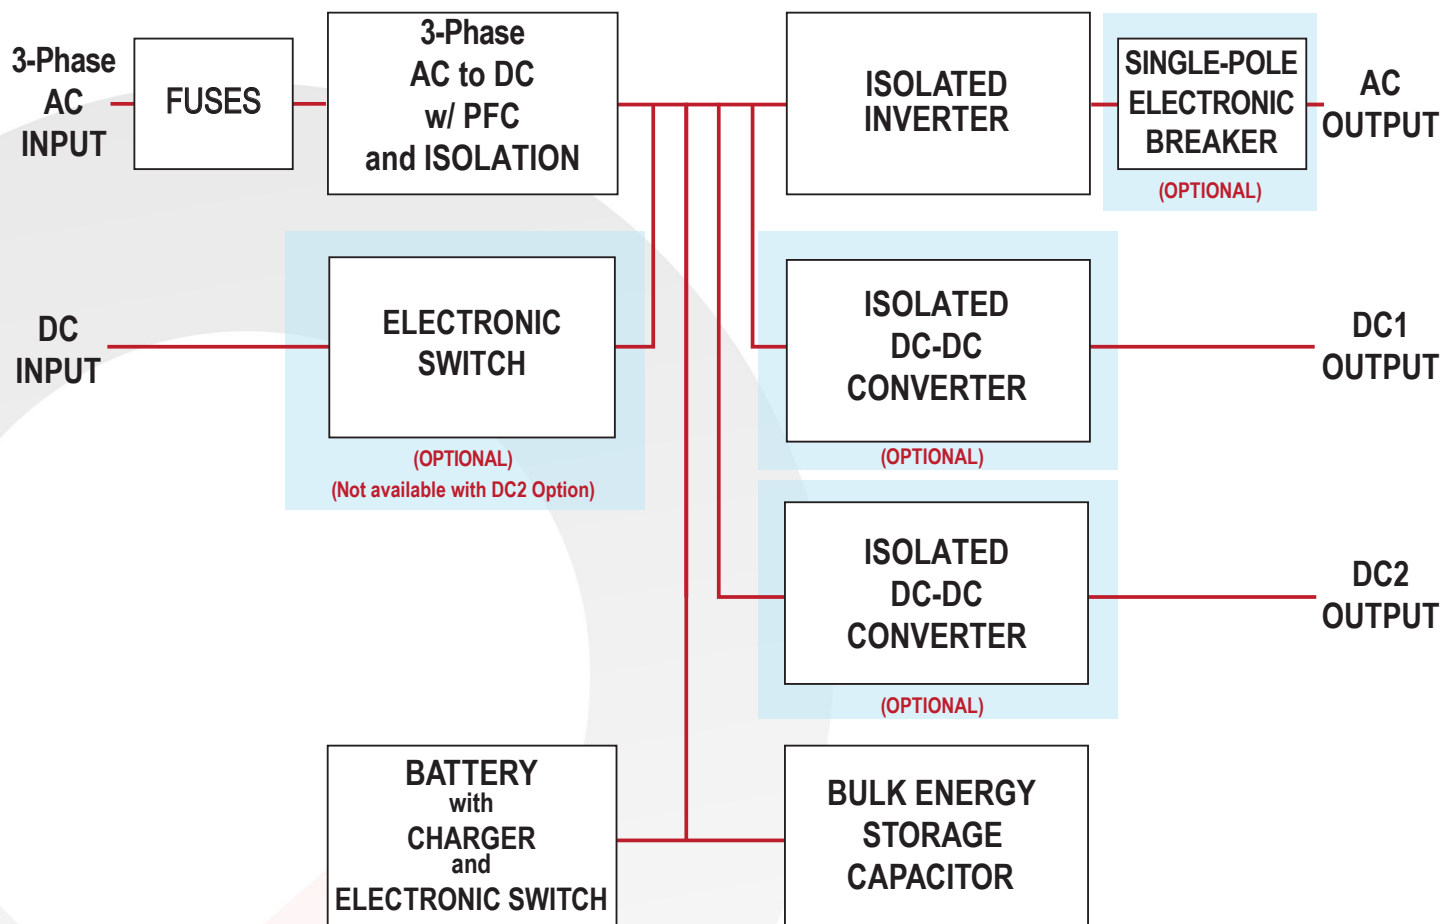

Total Output Power	< 1000 W	2 hrs
--------------------	----------	-------

Temperature Range for Recharge: 0°C to 45°C

Internal heaters maintain battery temperature above 0°C when input power is present.

Battery charging only enabled below +45°C.

Block Diagram

Application Section

“R” Option: AC Output Electronic Breaker

Fault Tolerant, Glitch-Free Operation

The “R” option adds an electronic breaker to the AC output of the UPS to permit fault-tolerant, glitch-free parallel operation. With this option, when several UPS units are connected in parallel at their AC outputs and one unit has an internal fault that might otherwise have pulled down the AC output bus, the electronic breaker will disconnect the failed unit so that the remaining paralleled units can continue to power the bus. This allows the system to be “fault-tolerant”. The disconnect occurs very quickly so that the AC output voltage will remain within its specified parameters as long as the remaining paralleled units can deliver the total load power. This allows the system to continue running “glitch-free”.

The electronic breaker is a single-pole breaker present in the hot-side AC output wire only. The neutral AC output wire is left floating from the UPS chassis to facilitate the paralleling of units into various configurations.

Expanded Paralleling

The “R” option also increases the total number of UPS units that can be paralleled to a maximum of 32. AC output current sharing among the paralleled units is accomplished with a high speed digital configuration cable. The units will share the total load current to within $\pm 2\%$, and for a split-phase or 3-phase system the AC voltages and AC currents will have phase balance within ± 2 degrees.

N+M Redundancy

Besides permitting a higher number of UPS units to be paralleled, the “R” option also makes it possible to set up N+1, or more generally N+M, redundant systems with a total of up to 32 UPS units. In such a system the failure of one unit (or M units) will not cause the overall system to fail. A failed unit can then be replaced to return the redundancy level to its original design. The replacement unit can be inserted into a live, operating system with proper precautions, but for safety reasons it is recommended that the system be turned off first.

Output Power Cable Connection

UPS systems are formed by first connecting the neutral wires of all the individual units together. For single phase systems, the hot wires are also connected together to form a single bank of UPS units. Split-phase systems are formed by connecting the hot output wires into two banks. One bank will have its output voltage phase-shifted 180° from the other. The phase-shift is determined by the configuration cable. Similarly, 3-phase systems are formed by grouping the hot output wires into three banks, each bank having its output voltage phase-shifted by 120° . Again, the phase shift is determined by the configuration cable. Since 3-phase systems are formed by connecting the neutral wires together and phase shifting the hot wires, the AC outputs must be wye-connected to form 3-phase systems. Delta connection of UPS units is not supported. However, once a 3-phase system is formed, loads may be connected as wye or delta.

The diagrams on the following page give examples of how multiple UPS units with the “R” option can be connected to create higher output power single-phase, split-phase, and 3-phase AC systems that will have N+M redundancy as long as N units are sufficient for the maximum load power per phase. Note, again, that the maximum total number of units that can be arranged in any of these configurations is 32.

Configuration Cables

Any system of “R” option UPS units requires a specific configuration cable that defines the arrangement of UPS units in the system. The configuration cable determines the phase shift for split-phase and 3-phase systems. The cable also provides high speed digital communication for current sharing on each phase.

Configuration cables for two parallel units and three parallel units in a single-phase system are available as standard products. Please contact the factory to purchase configuration cables for systems larger than three UPS units, or systems that have split-phase or 3-phase AC outputs.

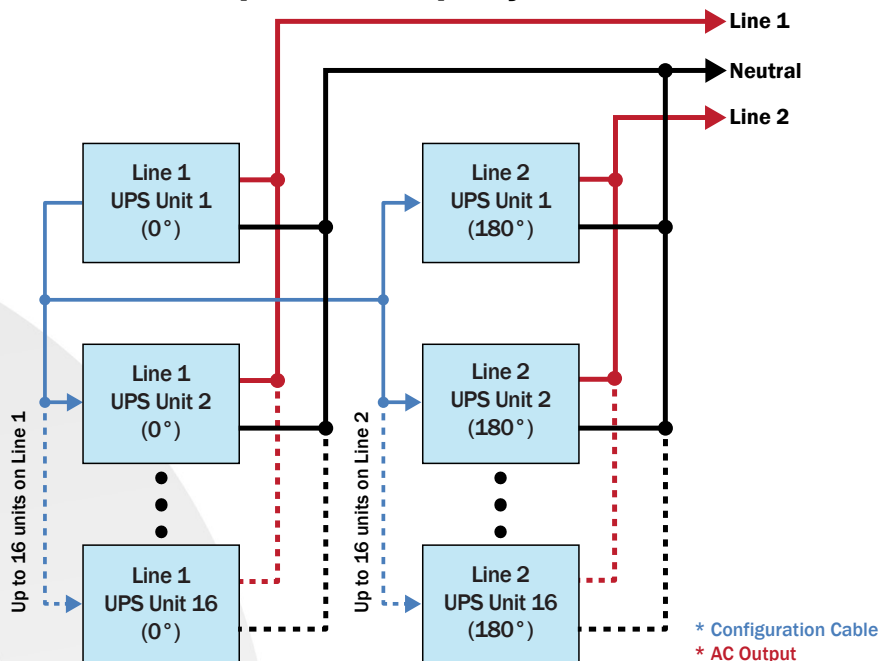

Configuration cables are required for paralleling the AC output only. DC outputs rely on droop share for paralleling, and do not require a configuration cable. See the “Ordering Information” page for DC output options with droop share that can be placed in parallel.
